71691 - Steel Weld-In Top Vent Opening Outward Window

This vented window is an all weld-in application with mild steel which accommodates a glass thickness of 10mm and up. The window can be sandblasted and primed to suit most specifications.

The panel is hinged at the top and comes with an adjustable 'C' quadrant arm to hold panel open. The opening panel is an aluminum frame and retaining ring which is toggled down for a watertight seal.

Window configuration can be used as a side hinged with a vertical center mullion. Heated glass can be adapted to this type of frame. When ordering advise the actual bulkhead cut-out and if you require depth stops for welding.

During installation, stitch weld the window frame into the bulkhead to avoid excessive heat build-up and possible seal or glass failure and damage.
