

BECLAWAT

Materials & Finishes

ANODIZING

On the left sample images show this process is a great way to protect aluminum from oxidizing. Clear anodizing is the standard for most products, however custom colors are available.

Beclawat has extensive experience working in aluminum, stainless steel and brass. Welded mitered or radius corners are available.

Pictured to the right is an aluminum framed door with a white powder coat finish. The door skin is stainless steel.

The materials used in the window to the right are a primed mild steel frame with a brass ring.

POWDERCOATING

Illustrated above, various powder coat colors are available. This finish stands up to the harshest elements. Standard colors are available in white and black.
